Introduce yourself to Apple's Macintosh software

Open...

Hundreds of applications for the Macintosh™ personal computer are available from Apple and other companies. That means you can use this powerful computer in business, education, and science—and even for entertainment.

The Software Sampler introduces Apple's business software for Macintosh: MacDraw™ for professional graphics, MacWrite™ for word processing, MacProject™ for project management, and MacPaint™ for illustrations. There's also a word about MacTerminal™ for data communications.

The disk contains the four software applications and a number of sample documents that enable you to explore applications on your own. This special software has all the features of the actual applications, with this exception: you can't save or print your practice work.

Here's how to use the Software Sampler:

- Become familiar with your Macintosh Plus by taking the Guided Tour and reading the owner's manual.
- Start up your Macintosh with the Software Sampler disk. Then choose Sampler Guide from the Apple® menu. The Sampler Guide contains basic guidelines for using the sample documents.
- Explore the sample documents in the order recommended on the disk. If you'd like to start a new document on your own, all four applications are in the Applications folder. (The Sampler Guide tells you how to start a new document.)

Should you accidentally erase the instructions in a sample document, just close the document and open it again. (Because no changes can be saved with the Software Sampler applications, everything will be restored and you can try again.) If you have difficulty with a procedure, skip over it and ask for assistance the next time you visit your authorized Apple dealer.

The actual applications that are represented in the Software Sampler can do much more than we can show you here. The manual that comes with each application contains complete instructions, including shortcuts and tips.

If you have any questions about using these applications in your line of work, see your authorized Apple dealer.

Welcome to Macintosh software. Enjoy the exploration!
