AS05: AppleSearch compatibility

Written by :   Chuq Von Rospach   December, 1993

In the Compatibility Checker application shipped with System 7 Pro, AppleSearch's compatibility state is listed as not known, because at the time the Compatibility Checker's data was frozen, AppleSearch had not yet been released.

AppleSearch 1.0 has been tested against System 7.1Pro as well as all current Macintosh CPUs (including the AV machines) and there are no known compatibility problems. A future version of the Compatibility Checker will be corrected to show this fact.
